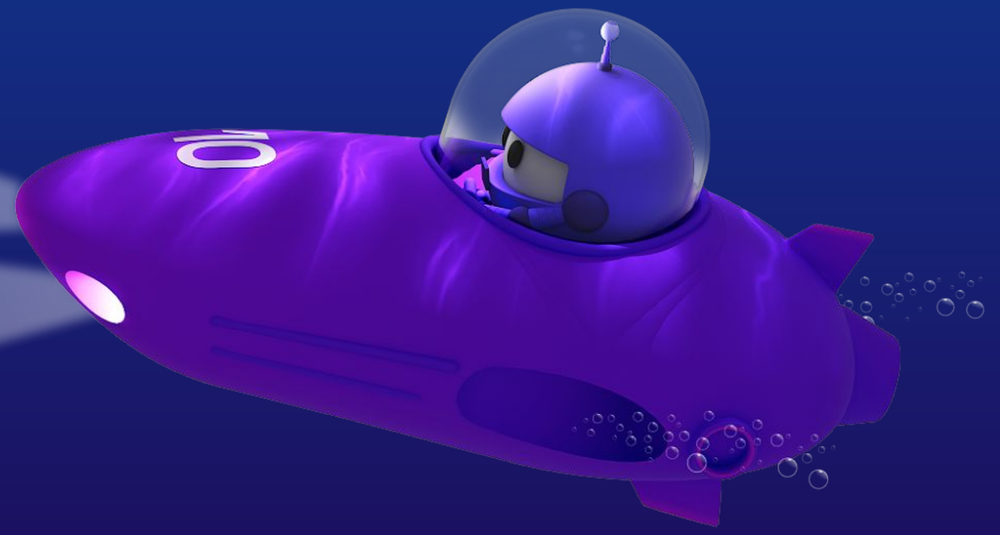
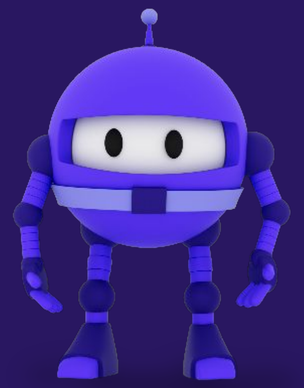
Back to the origin with AI

.NET Meetup

.NET



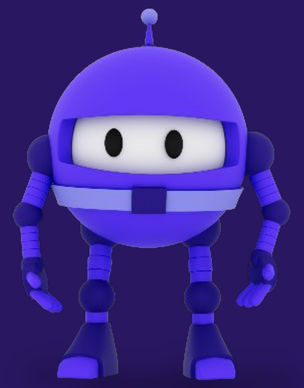
X Spoiler



.NET Developer Day - Thailand 2026

TQRCG

Y Initial Survey



Survey

Let’s the audience speak

1. How many people are using the AI everyday for their job or life activities ?
2. How many people have not ever use the AI ?
3. How many developers are here now ?
4. How many .NET Developer are here now ?
5. How many not-developer are here now ?
   a. Are you aware why you are here ? 🤔

01 Preface

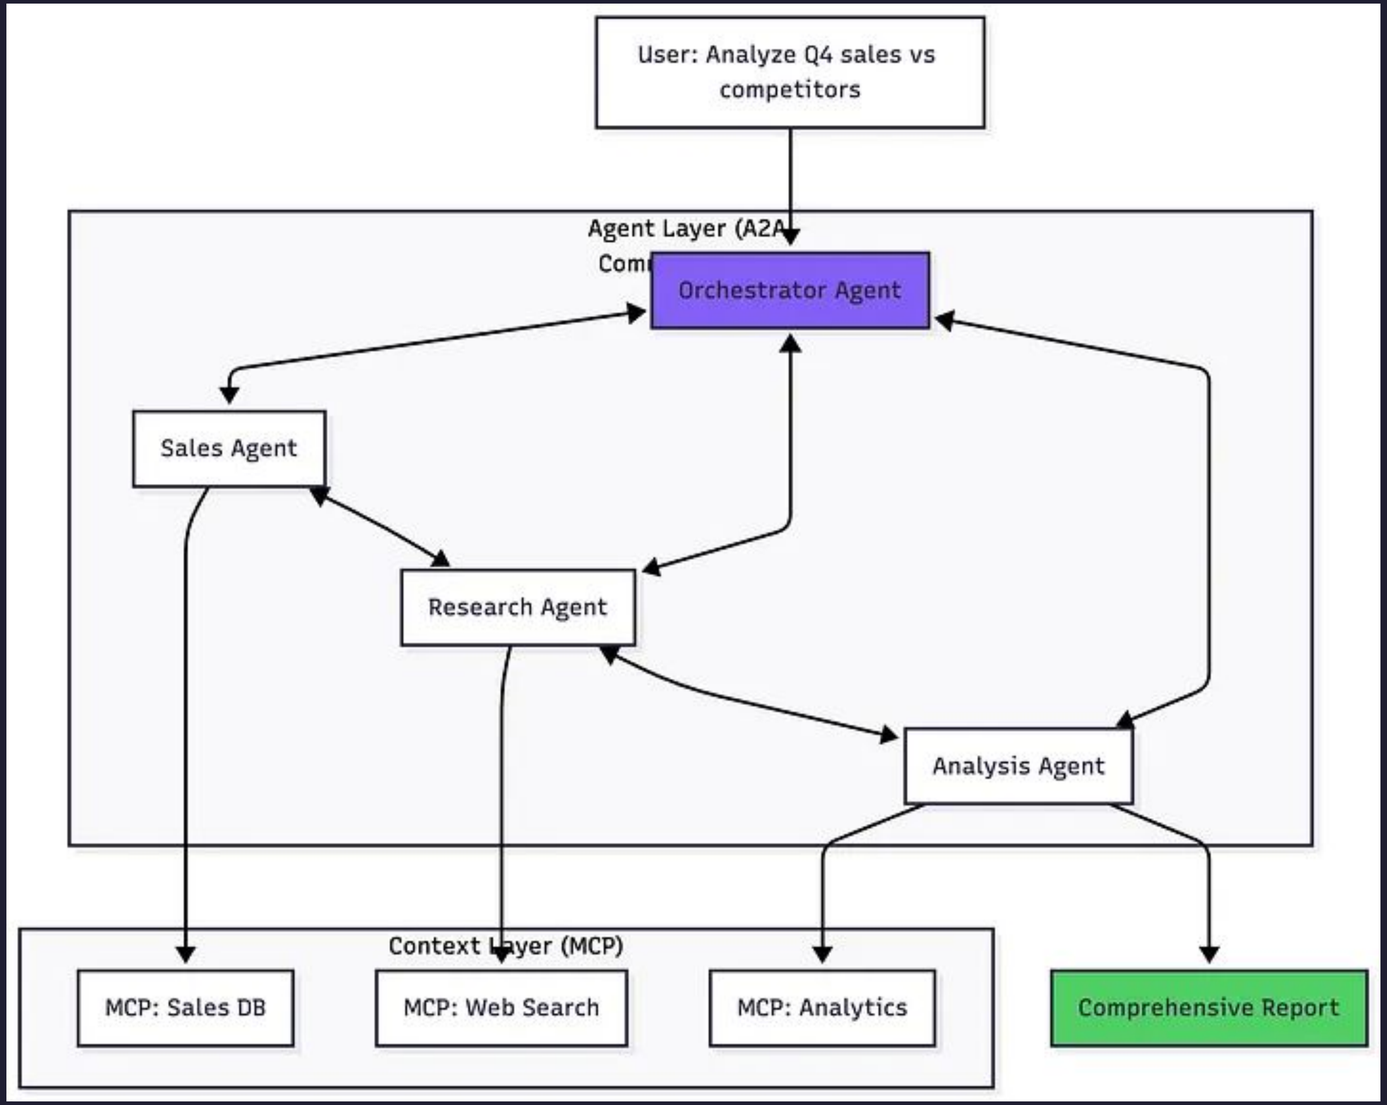
Real Story
Agent-2-Agent

Simple Architecture of Agents.

What we really want to have.



Real Story
Agent-2-Agent

What happen in reality.

```
Expected: 1,000 tokens per request
Reality: 45,000 tokens per request

Reason: Agent keeps loading entire documentation
        into context every single time
Cost: $1,350/day instead of $30/day
```

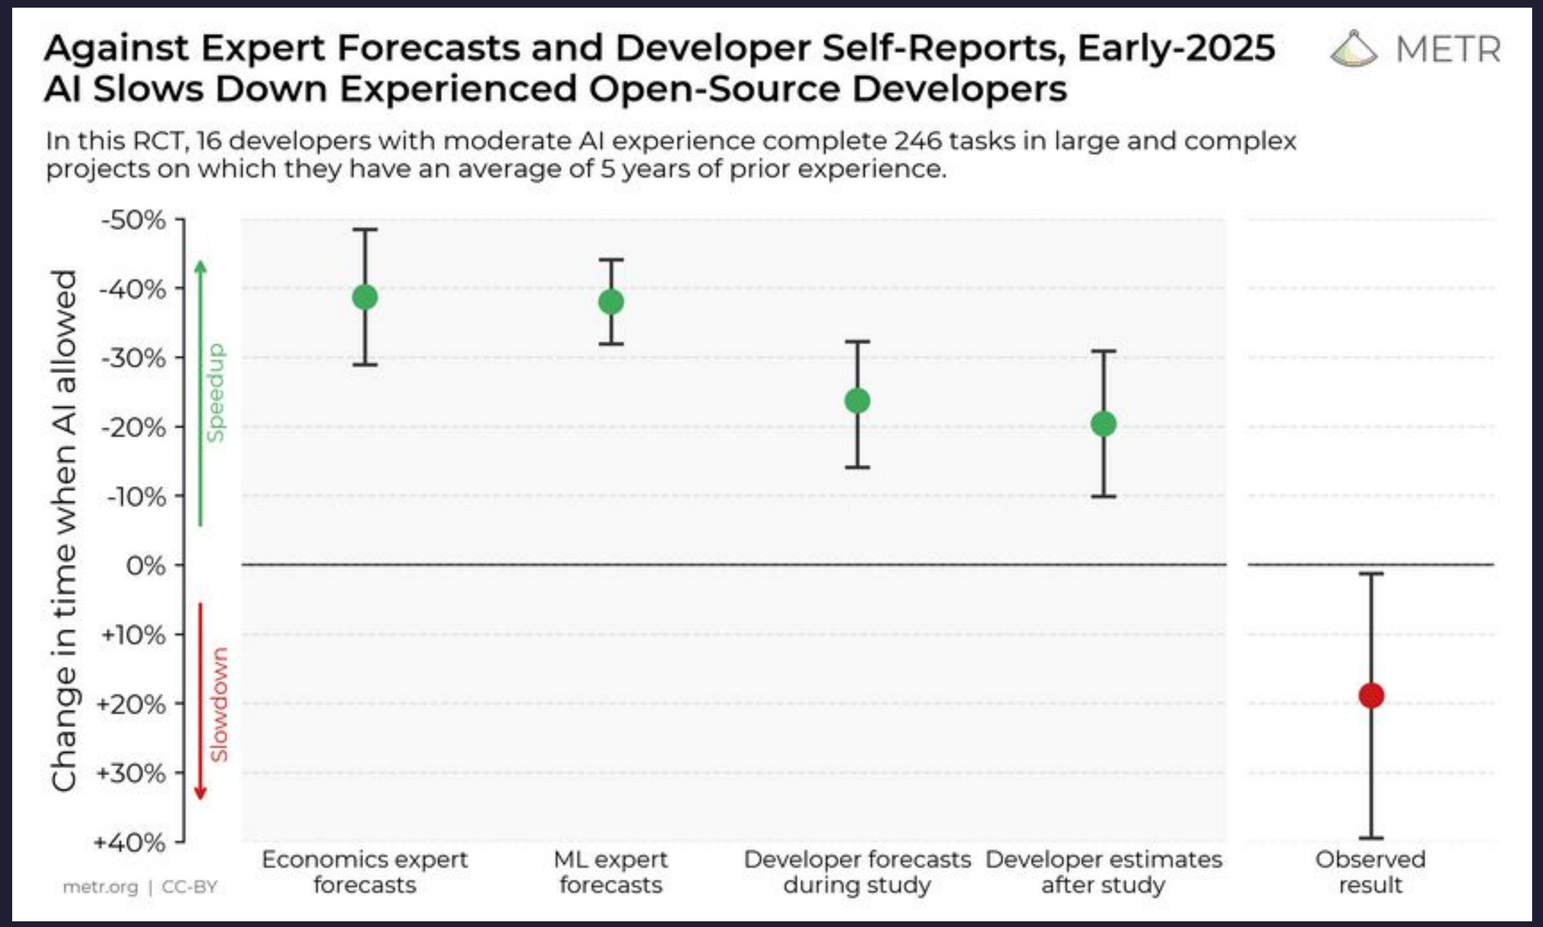
Giorgio says: *“A2A - Appetizer 2 Appetizer : how to be full before the meal”*

METR Report

Result is behind the expectations

METR conducts research and evaluations to improve public understanding of the capabilities and risks of frontier AI systems.

Measuring the Impact of Early-2025 AI on Experienced Open-Source Developer Productivity



https://metr.org/blog/2025-07-10-early-2025-ai-experienced-os-dev-study/

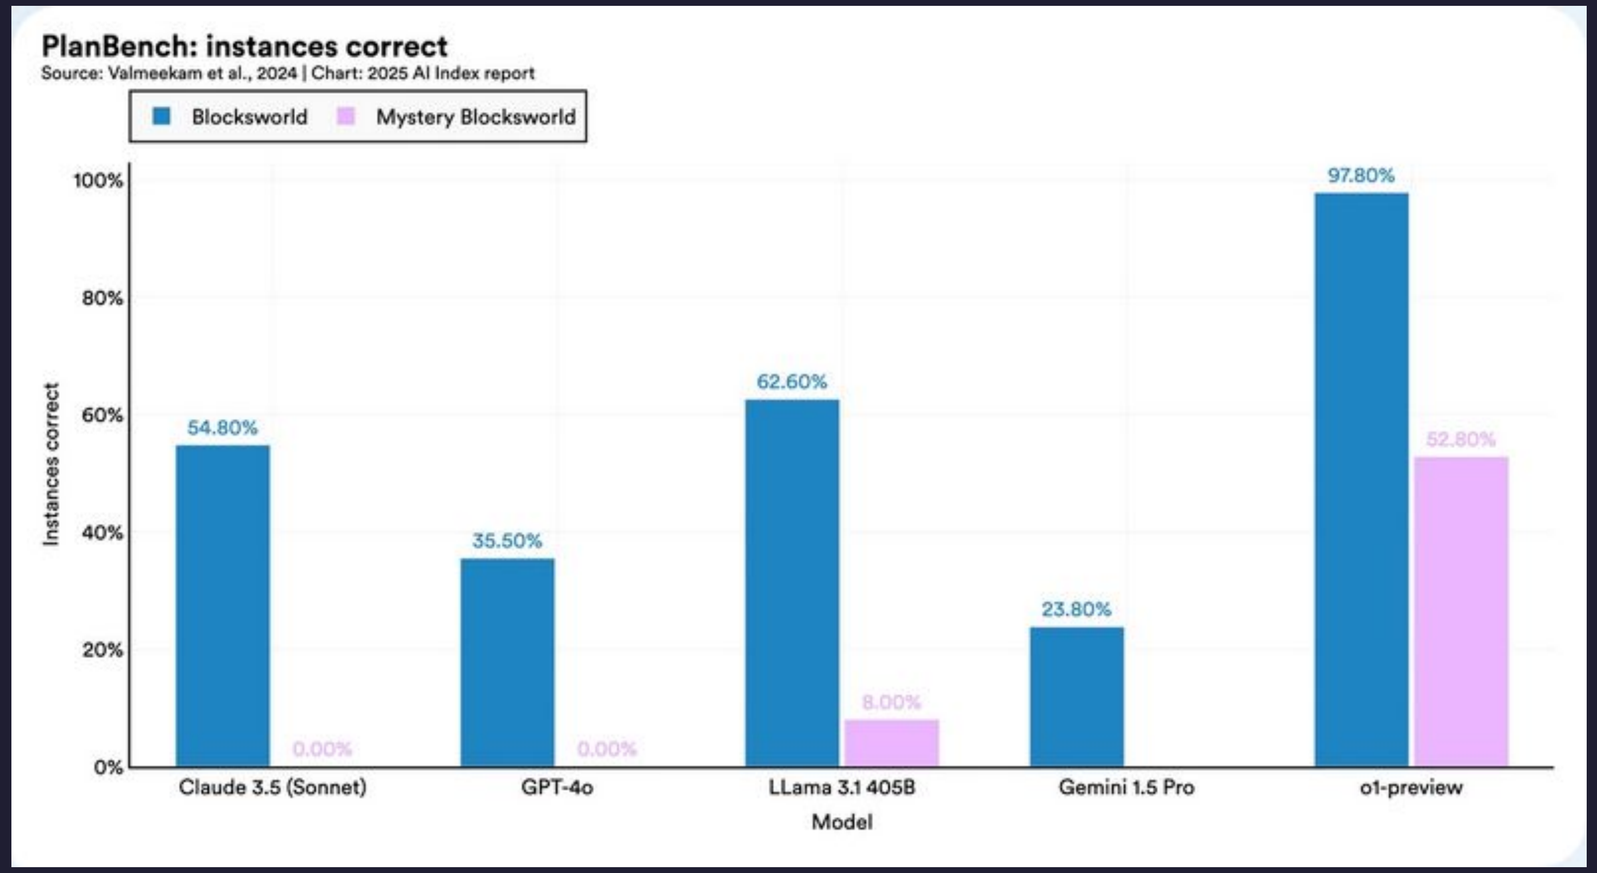
Giorgio says: *"Expectation creates a quantum wave weak and far from reality"*

Stanford HAI
Report AI 2025

Complex reasoning is still a challenge

"AI models excel at tasks like International Mathematical Olympiad problems but still struggle with complex reasoning benchmarks like PlanBench.

They often fail to reliably solve logic tasks even when provably correct solutions exist, limiting their effectiveness in high-stakes settings where precision is critical."



https://hai.stanford.edu/ai-index/2025-ai-index-report

Giorgio says: "K.I.T.T. come here … But I am still waiting for"

What we can do, to do what we want to do ...

Cost

ALOT 💸

Both running in local than remote

Outcome

KISS 💋

We want a simple result, not the moon !

AI is not AI

Generation not thinking 🔔

Our mind mislead us. Stay on the reality and use what we have for what they are

Orchestration

DIY 🔧

Old school method: use an imperative approach and abandon the declarative one for the important tasks

Complexity

Avoid it

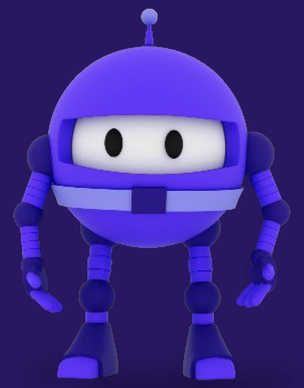
Try to use what we have to do our job

“We”

Read the title of the slide 👑

I always address “me” as “we”. I have the same issues of famous people, such as Bruce Wayne

02 Concepts



What we want
Target definition

Develop application(s)

Use multiple AI agents

Execute established workflow(s)

What we want
Target definition

Interaction with AI

Run on local or remotely

Minimalistic approach

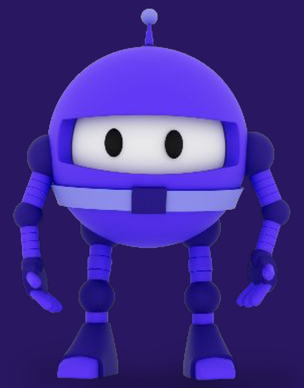
Solution

Topic of the talk

Console application

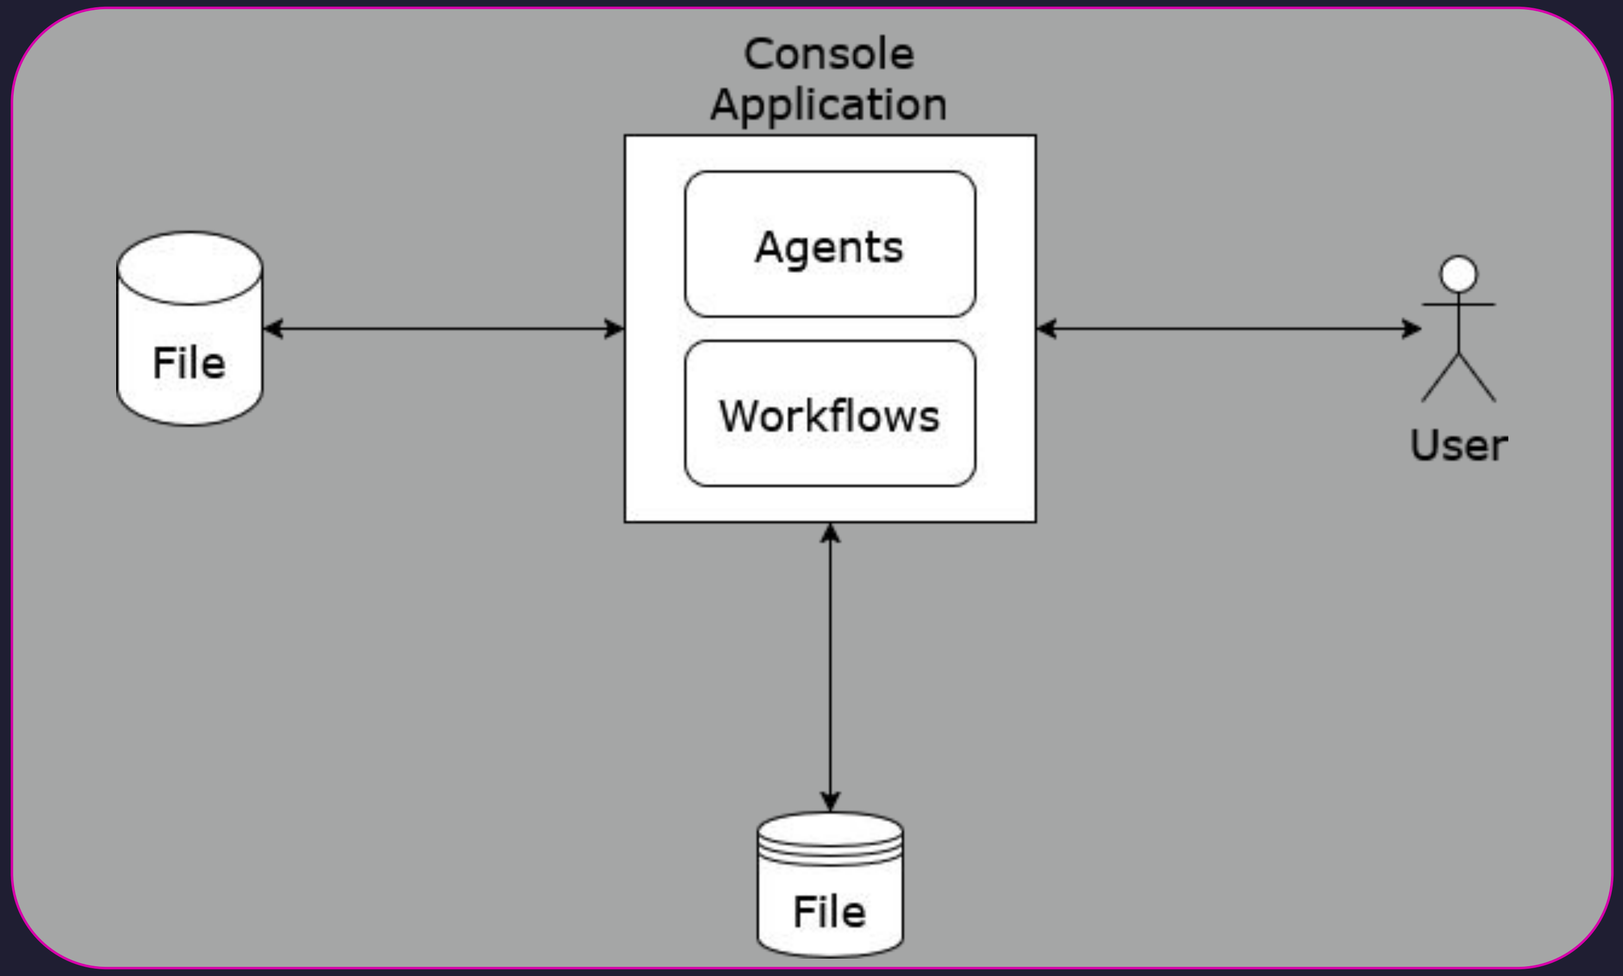
```
>_dotnet new console ...
```

03 Implementation



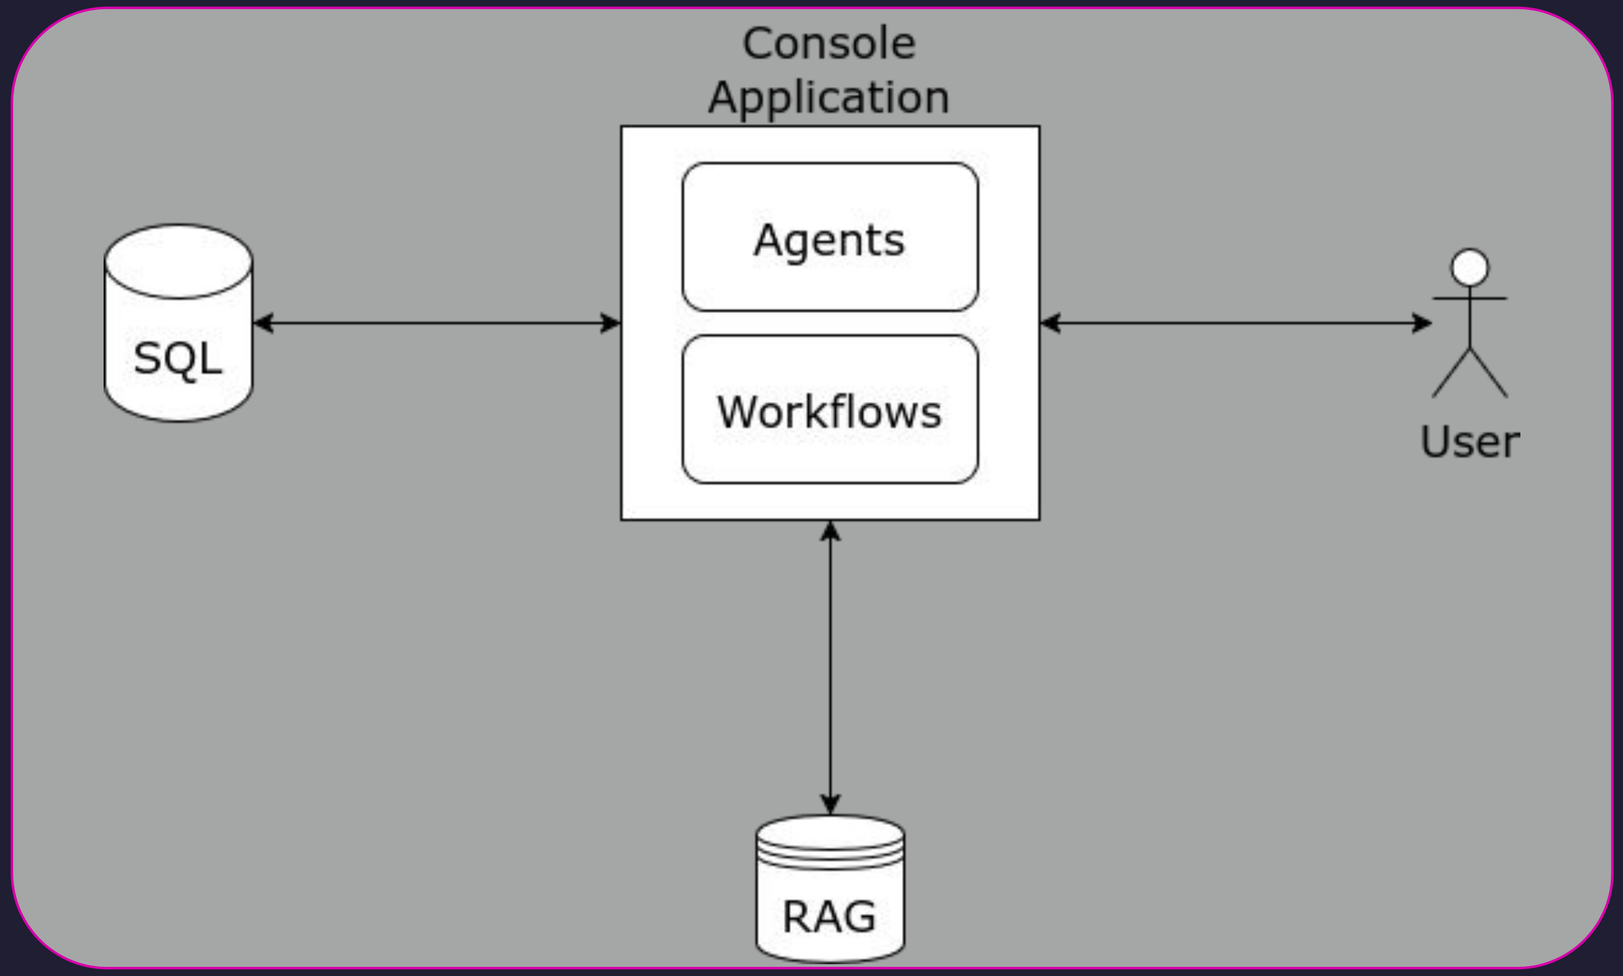
Architecture

Diagram - Local

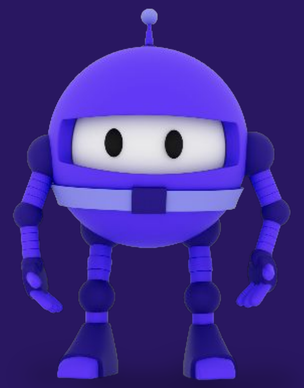


Architecture

Diagram - Remote



04 Example



Coding example

Warning

- This is an example and alpha version
- Some piece of code could be shown - because the other does NOT exist
- Follow me for future updates

Coding example

Let’s code

Giorgio open the editor please … don’t be shy

Coding example

Question #1

Giorgio, Why did you not used Semantic Kernel or other .NET Libraries?

Coding example

Question #2

Giorgio, Why did you not used existing tools / frameworks / others and you implemented a custom project ?

Coding example

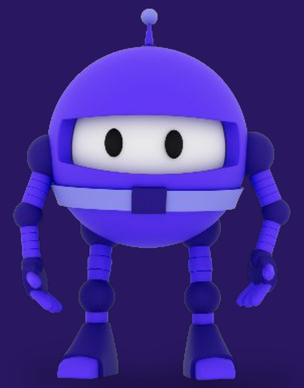
Question #3

Giorgio, Why .NET and
not Python,

or Java,

or `([“Java”,“Type”]){1,1}“Script”` ?

05 Considerations



Considerations

Come back on time

Developer role

Embrace the whole vision of the system

... (see later)

Consideration

Developer role

- Welcome back to my time !
- Be responsible of the quality of the outcome
  - Understand the flow of the instructions
- Be responsible of the timing of the outcome
  - AI goes fast, but it is a generation

Consideration

Embrace the whole vision of the system

- Welcome back to my time !
- You are the responsible for the outcome:
  - **(HOW)** Not focus on code production
  - **(WHY - WHAT - HOW)** Focus on the entire project management aspects

Consideration

... See Later = Future => Quantum Computing

- Welcome to my future !
  - Reduce the ML tasks (quantum ML)
  - Reasoning (quantum reasoning)
  - Entanglement to manage in the architecture
  - Lecture recommended: 2505.23860v3
- Quantum Development Kit and Q# 👈👈👈👈
